

Multi Factor Authentication

Intent

#Multi_Factor_Authentication

Dialog

I can help you with that!

If your organization has mandatory Multi Factor Authentication, logging in with MFA allows access to any options requiring FCC mandated additional authentication.

If you have a banner that is alerting you to set up Multi Factor Authentication:

Click [here](https://profilemgt.firstnet.att.com/icam-firstnet/my-profile-view-only)

Select **Edit Profile**.

Under Profile Security, check the box for **Always use MFA**.

Enter your password to confirm your changes and select **Save**.

Choose **Set up now** on the successfully saved changes window

Under use another 2FA method, select **Set up 2FA** with SMS messaging

Enter any SMS capable wireless number (no VOIP) to receive the SMS to complete the setup. Select **Continue**.

Complete the setup by adding the SMS information into the screen prompt.

You are set! Now you can access any applications from FirstNet Central that require multi factor authentication.[MSG_LINE_BR~05000]
